Filed : October 12, 2001

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

**Please withdraw claims 3, 5-6, 10-16, 20 and 22-23.**

**Please amend claims 4, 5 and 20 as follows:**

---

Claim 1 (original): A medical device, comprising:

an elongate tubular body having a proximal end and a distal end and a lumen extending therethrough;

an inner wire within the lumen of the elongate tubular body having a proximal end extending proximal to the proximal end of the elongate tubular body and a distal end, the inner wire being moveable relative to the elongate tubular body;

a, an expandable member connected to the distal end of the elongate tubular body;  
and

a coil extending over the inner wire at a proximal end thereof, the coil being attached to the proximal end of the elongate tubular body.

Claim 2 (original): The medical device of Claim 1, further comprising a proximal hypotube connected to a proximal end of the coil, wherein the inner wire extends through the proximal hypotube.

Claim 3 (withdrawn): The medical device of Claim 2, further comprising a protective tubing over the proximal end of the coil and the distal end of the proximal hypotube.

Claim 4 (currently amended): The medical device of Claim 1, wherein the proximal hypotube is crimped to the inner wire.

Claim 5 (withdrawn): The medical device of Claim 1, further comprising a protective tubing applied over the proximal end of the ~~hypotube~~ elongate tubular body and distal end of the coil.

Appl. No. : 09/976,679  
Filed : October 12, 2001

Claim 6 (withdrawn): The medical device of Claim 1, wherein the inner wire has a diameter proximal to the tubular body that is greater than the diameter of the lumen.

Claim 7 (original): The medical device of Claim 1, wherein the expandable member is an occlusive device having a proximal end connected to the tubular body and a distal end connected to the inner wire, wherein relative movement of the inner wire with respect to the tubular body causes the occlusive device to move from a nonexpanded configuration to an expanded configuration.

Claim 8 (original): The medical device of Claim 7, wherein the coil is compressed when the occlusive device is in a nonexpanded configuration.

Claim 9 (original): The medical device of Claim 1, wherein the expandable member is a balloon.

Claim 10 (withdrawn): The medical device of Claim 9, wherein the inner wire includes a valve for sealing the lumen of the elongate tubular body.

Claim 11 (withdrawn): The medical device of Claim 9, wherein the inner wire includes a plunger, and wherein advancing and retracting the plunger selectively inflates and deflates the balloon.

Claim 12 (withdrawn): A medical device, comprising:

an elongate tubular body having a proximal end and a distal end and a lumen extending therethrough;

a pull wire within the lumen of the tubular body having a proximal end extending proximal to the proximal end of the tubular body and a distal end;

an expandable occlusive device having a proximal end connected to the tubular body and a distal end connected to the pull wire, wherein relative movement of the pull wire with respect to the tubular body causes the occlusive device to move from a nonexpanded configuration to an expanded configuration;

wherein the pull wire at its proximal end has at least one taper that increases the diameter of the pull wire to a size larger than the diameter of the lumen.

Appl. No. : 09/976,679  
Filed : October 12, 2001

Claim 13 (withdrawn): The medical device of Claim 12, comprising two tapers at the proximal end of the pull wire, each of the tapers increasing the diameter of the pull wire proximally and separated by a section of constant diameter.

Claim 14 (withdrawn): The medical device of Claim 13, wherein when the occlusive device is in its nonexpanded configuration the more distal of the two tapers abuts against the proximal end of the tubular body.

Claim 15 (withdrawn): The medical device of Claim 14, further comprising a thin walled hypotube extending from the proximal end of the tubular body and extending over the section of constant diameter.

Claim 16 (withdrawn): The medical device of Claim 15, wherein the thin walled hypotube has an outer diameter that is substantially the same as that of the tubular body.

Claim 17 (original): A medical device, comprising:

an elongate tubular body having a proximal end and a distal end and a lumen extending therethrough;

an inner wire within the lumen of the elongate tubular body having a proximal end extending proximal to the proximal end of the elongate tubular body and a distal end, the inner wire being moveable relative to the elongate tubular body;

an expandable member connected to the distal end of the elongate tubular body;  
and

a proximal hypotube attached to the proximal end of the inner wire.

Claim 18 (original): The medical device of Claim 17, wherein the expandable member is an occlusive device having a proximal end connected to the elongate tubular body and a distal end connected to the inner wire, wherein relative movement of the inner wire with respect to the tubular body causes the occlusive device to move from a nonexpanded configuration to an expanded configuration.

**Filed** : October 12, 2001

Claim 19 (original): The medical device of Claim 18, wherein when the occlusive device is in its expanded configuration, a gap is defined between the tubular body and the proximal hypotube.

Claim 20 (withdrawn): The medical device of Claim ~~17~~ 19, further comprising a protective tubing extending over the gap and attached to the proximal hypotube.

Claim 21 (original): The medical device of Claim 17, further comprising a coil between the proximal hypotube and the tubular body.

Claim 22 (withdrawn): The medical device of Claim 21, wherein the proximal hypotube, the coil and the tubular body are integrally formed.

Claim 23 (withdrawn): The medical device of Claim 17, wherein the inner wire has a diameter at its proximal end that is larger than its diameter at its distal end.

Claim 24 (original): The medical device of Claim 17, wherein the expandable member is a balloon.

Claim 25 (withdrawn): The medical device of Claim 24, wherein the inner wire includes a valve for sealing the lumen of the elongate tubular body.

Claim 26 (withdrawn): The medical device of Claim 24, wherein the inner wire includes a plunger, and wherein advancing and retracting the plunger selectively inflates and deflates the balloon.
